NOW AVAILABLE

DARKTRACE / SECURE AI

ADOPT AI WITH CONFIDENCE. KEEP IT VISIBLE, GOVERNED AND SECURE.

As AI adoption grows, organisations face a simple challenge: **who is using AI, what are they sharing, and is that activity creating risk?**

Darktrace / SECURE AI gives organisations visibility and control across their AI environment, helping them adopt AI safely without unnecessarily restricting its use.

HOW IT HELPS ORGANISATIONS

UNDERSTAND AI USAGE
See prompts, sessions and responses, and identify risks such as sensitive data exposure.

DISCOVER SHADOW AI
Uncover unsanctioned AI tools being used across the business.

MONITOR AI AGENTS
Understand what agents can access, what actions they take and how they interact with systems.

REDUCE AI DEVELOPMENT RISK
Identify excessive permissions or risky configurations before AI agents are deployed.

WHAT MAKES DARKTRACE DIFFERENT?

Darktrace uses its **Self-Learning AI** to understand what normal AI activity looks like within each organisation, identifying subtle changes in behaviour and the context and intent behind AI activity, rather than relying only on static rules.

When risky or unusual activity is identified, organisations can apply targeted guardrails and controls to reduce malicious use or sensitive data leakage, while employees continue to use AI productively.

ENABLE AI ADOPTION, WHILE KEEPING IT VISIBLE, GOVERNED AND SECURE.
