DISC BRAKE PADS

Packaging samples

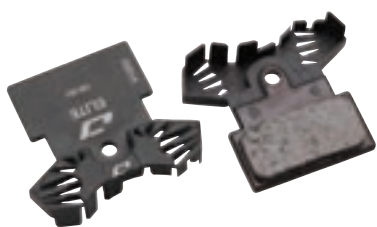

Bulk packaging sample

Six performance levels. What the difference?

Disc brakes are not just for mountain bikes anymore! With more riders discovering the advantages of using disc brakes on their bikes, it's important to understand the types of pads available and which is best suited to different bikes and conditions. With six different pad types in over 25 shapes, Jagwire has options for nearly every bike and rider.

Elite Cooling

Excessive heat is the enemy of a high-performance brake system. Not only can the pad compound glaze over and result in a sudden loss of braking power, extreme high temperatures can even cause hydraulic brake fluid to boil. Cooling disc brake pads are designed and built to pull heat away from the braking surface and into cooling fins above the brake, where it can be safely dissipated into the air.

WHEN TO USE: For riders that push their bikes to the limit, Elite Cooling their brakes working their best, even on the biggest descents.

Pro e-Bike

Electric-assist bikes have unique needs for braking performance. With additional weight and speed from the motor, E-bikes put significant strain on the brake pads. Pro E-Bike disc brake pads are tuned to provide additional stopping power and durability. They also offer consistent modulation with little braking noise.

WHEN TO USE: Designed for the unique demands of pedal-assist E-bikes, Pro E-Bike pads are perfect for both city E-bikes and E-MTBs.

Pro Extreme Sintered

When durability and consistency is necessary in all riding conditions, look no further than the Pro Extreme Sintered pads. With a dense, aggressive sintered compound, these pads deliver dependable, confident stopping power, even when things get hot. Mounted on a steel backing plate, the compound also resists water, making it especially effective in wet conditions.

WHEN TO USE: A favorite of Cyclocross, DH, and Enduro racers, sintered pads are ideal for wet, dirty conditions and continue to perform when pushed to the limit.

Pro Semi-Metallic

For riders looking for premium performance, Jagwire Pro Semi-Metallic pads feature a lightweight aluminum backing plate, reducing the weight by nearly 50%. The high-performance semi-metallic compound combines the low-noise and positive braking feel of a resin pad with the longevity and wet-weather performance of a metallic pad.

WHEN TO USE: Perfect for road bikes, XC race, or any other bike where every gram counts.

Sport Semi-Metallic

Our most popular disc brake pads, the Sport Semi-Metallic pads are a great choice for most riders. An upgrade over most OEM pads, they feature a high-performance semi-metallic compound that blends the low-noise of a resin pad with the durability of a metallic pad. Mounted to a steel backing plate, these provide both performance and value.

WHEN TO USE: Combining the best attributes of both organic and metallic pad compounds, Sport Semi-Metallic pads are an excellent all-purpose option.

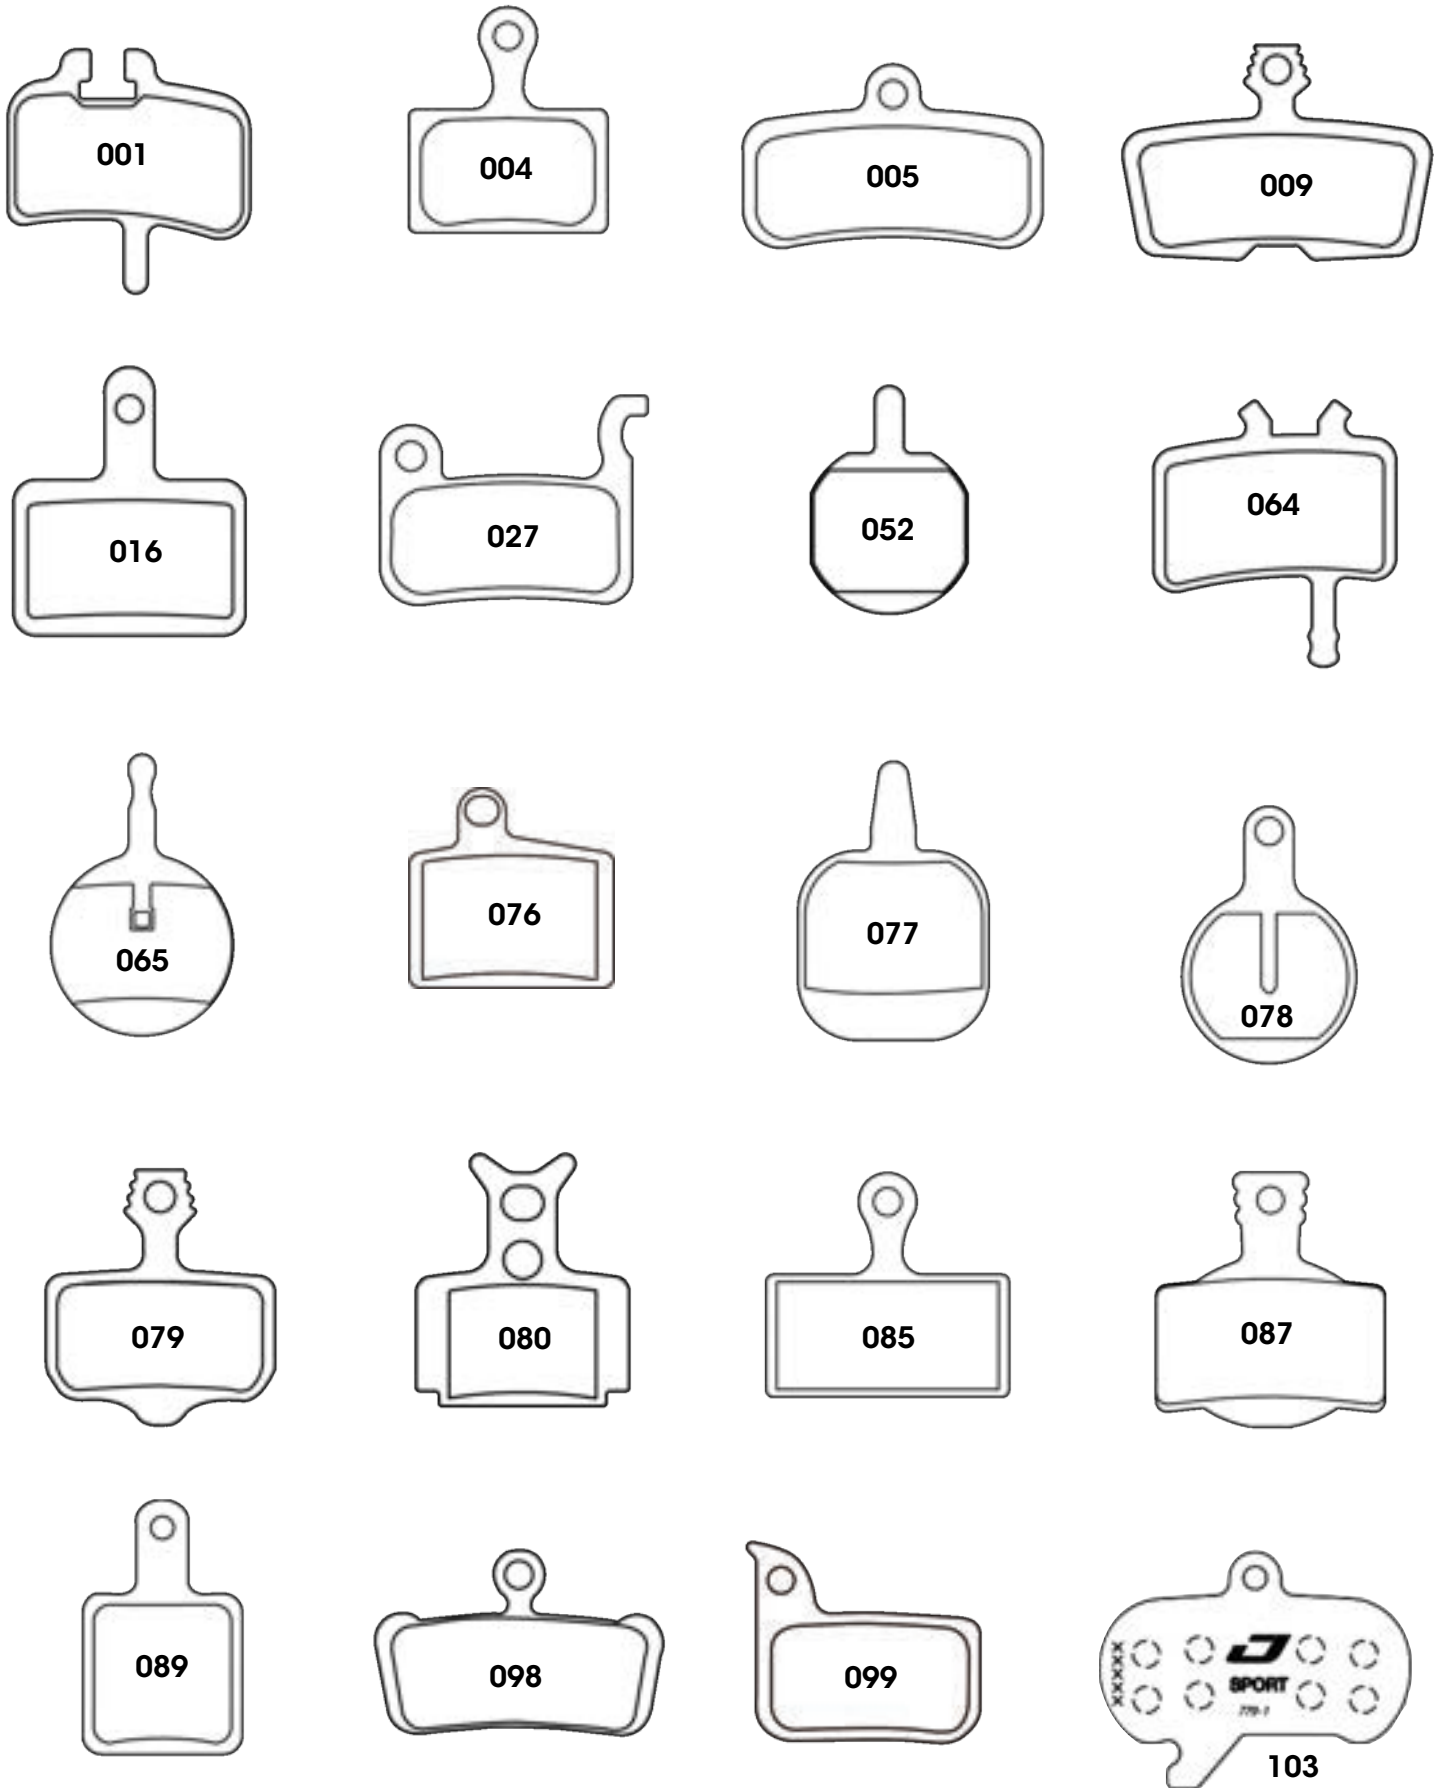

Sport Organic

Organic disc brake pads offer good stopping power while keeping noise to a minimum. While not as durable as other pad types, they feature a resin-based compound that provides a positive brake feel and excellent modulation. Mounted on a steel backing plate, these pads deliver outstanding value.

WHEN TO USE: These pads are great for bikes that are primarily ridden in dry conditions and riders that prefer their brakes to have more initial grab.

NOTE: If a brake rotor is labeled "For Resin Pads Only", ONLY use organic/resin pad compounds. Semi-Metallic, E-Bike, and Sintered compounds are NOT compatible.

HYFLOW HYDRAULIC HOSES

HyFlow® Quick-Fit hoses feature a pre-installed universal adapter at the caliper end of the hose. The universal adapter connects to the 0 degree Banjo fittings found in Jagwire's Quick-Fit Fitting Kits designed for many popular systems. Cut the hose once to achieve your two desired lengths, then fit the lever hardware to the cut end and thread universal adapter end of the hose onto the Quick-Fit fitting installed on the caliper. Technology of this sort has been proven on motorcycle hydraulic systems for decades and the Quick-Fit caliper adapter brings it to the bicycle. One Quick-Fit hose and one Quick-Fit Fitting Kit is all you need for one bicycle.

PRO HYDRO QUICK-FIT™ ADAPTER KITS

Designed to work seamlessly with our Pro Hydraulic Hose, Jagwire Quick-Fit™ Adapters are the perfect way to ensure braking performance and durability. Each adapter kit contains all the components required to connect Jagwire Pro Hydraulic Hoses to popular brakes from SRAM®, Avid®, Shimano®, Formula®, Hope®, Hayes®, Magura® and Tektro®. Each kit includes enough hardware for one bicycle. Because the fittings are separate from the hose, dealers can offer more color choices without adding inventory.

ELITE HYDRAULIC HOSE CUTTER

A neatly cut hydraulic hose is just as important for the home mechanic as it is for the pros. The hand-held design of our hose cutters makes it possible to cleanly prepare hoses anywhere in the workshop.

- Innovative design provides extra leverage for smooth, clean cuts.
- Ergonomic handles ensure comfortable operation for all-day use in professional workshops.
- Premium aluminum construction.
- Cutting slot is shaped to secure the hose and ensure a perpendicular cut.
- Replaceable cutting blades (WST027).

PRO 2.0 CABLE CRIMPER AND CUTTER

The cutting blades are optimized to maximize leverage when cutting 0.8-1.6mm inner cables, ensuring smooth, clean cuts. The redesigned crimping function has three blades that contract as the handle is closed, utilizing a minimal size to crimp tips on hard-to-reach cables. The ergonomic handles ensure comfort for all-day use. Thumb latch allows the tool to be opened or locked closed with just one hand.

Sport Zip Tie Cutter

The Jagwire Sport Zip Tie Cutter cleanly cuts plastic zip-style cable ties for a professional look. The innovative holding feature allows for one-handed operation while keeping the workshop clean. Holding feature to secure the scrap after the cut is complete. Compact, ergonomic design.

WST073 RRP \$34.99
\$19.99

Holding Feature

This innovative design secures the loose scrap of zip tie once it has been cut. This help to keep the workshop clean of debris while allowing for one-handed operation.

J-Tool

- Jagwire disc brake tool in signature "J" shape
- Cutouts provide a quick check for pad and rotor thickness
- Compatible with 1.8mm, 1.85mm, 2.0mm, and 2.3mm original thickness rotors; the gauges provide a go/ no-go check to test for 0.3mm of wear, the common standard for replacement
- Caliper alignment function aids in pad setup

PRO INTERNAL ROUTING TOOL

Jagwire's Pro Internal Routing Tool simplifies routing through a frame, using powerful magnets to safely and easily guide cables, hydraulic hoses and e-shift wires. Constructed from reinforced plastic. LED Flashlight (batteries included). Extendable, flexible, magnet. Soft coated magnet protects the frame finish. Easy to follow detailed instruction sheet. Retractable, flexible magnet can be inserted into receiving end of a housing run to find the magnetic adaptor and easily pull it through. Magnetic adaptor attaches to cables, housing, hydraulic hose, and electronic wires.

ELITE BLEED KIT - Update Product

Premium syringes offer enhanced clarity, improved durability, and ergonomic handles
 Innovative 1/4 turn valves make it easy to quickly open and close the bleed system
 Straight and 90-degree clips keep the syringe upright to lend an extra hand to the technician
 Includes bleed blocks for most popular 2-piston and 4-piston brake calipers
 Extra-long 16cm hose included for filling brake fluid from bulk canisters.
 Available separately for DOT fluid and mineral oil systems, each kit contains adapters for nearly all disc brake systems on the market.
 Deluxe case keeps small parts organized and protected.

Performance Groups

With a product range that includes everything from elite level, race-ready products to entry-level, basic solutions, we use four performance levels to make it easy to understand. Our products are classified into one of four ranges:

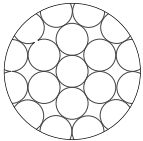

ULTIMATE ELITE: The best, race-ready product available.

BEST PRO: High-performance upgrades to standard housing and cables.

BETTER SPORT: OEM-level replacement products that combine durability and performance.

GOOD BEST: No-nonsense, low-cost, reliable replacement parts.

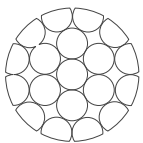

GOOD | **BETTER** | **BEST** | **ULTIMATE**
BASICS | **SPORT** | **PRO** | **ELITE**

Elite Polished Ultra-Slick Stainless Steel

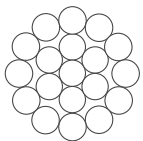

Elite Ultra-Slick cables are made from pre-stretched, die-drawn stainless steel and undergo a highly intensive polishing process to remove the smallest imperfections. This creates a near mirror finish and class-leading low friction performance. Unlike other ultra-slick cables that use a fragile coating, Jagwire Elite Polished Ultra-Slick cables are long-lasting and don't require the use of a specific housing or lubricant. These cables deliver incredibly accurate, smooth movement for riders that demand the ultimate performance from their bikes.

GOOD | **BETTER** | **BEST** | **ULTIMATE**
BASICS | **SPORT** | **PRO** | **ELITE**

Pro Polished Slick Stainless Steel

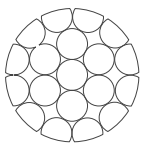

Like the Elite Ultra-Slick cables, Jagwire Pro Polished Slick Stainless cables undergo additional processing to remove imperfections. While not polished to the same extent as the Elite cables, Pro Polished cables deliver many of the same benefits at a lower price. With no coating, these are highly durable and compatible with all performance housings and lubricants. Pro cables are perfect for riders looking to upgrade their high-performance bikes at a modest cost.

Pro Polished Stainless for Dropper Stainless Steel

Spiral-bound stainless cables undergo a polishing process to remove imperfections, and the 0.8mm diameter improves flexibility and further reduces friction. With no coating to wear off, these cables provide long-lasting performance. STR-PS cables are designed for use only with dropper seatposts and remote levers. Gold tint is applied for easy identification.

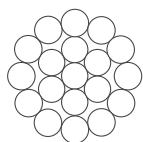

GOOD | **BETTER** | **BEST** | **ULTIMATE**
BASICS | **SPORT** | **PRO** | **ELITE**

Slick Galvanized or Stainless Steel

An upgrade from basic cables, these stainless steel strands are pre-stretched and extruded through a die that removes any rough edges. The result is a smooth surface that reduces friction along the length of the cable. These cables are the most popular choice for riders balancing performance, durability and cost. Stainless steel option offers greater resistance to corrosion.

GOOD | **BETTER** | **BEST** | **ULTIMATE**
BASICS | **SPORT** | **PRO** | **ELITE**

Galvanised or Stainless Steel

Low-cost, no-nonsense shift or brake cables are made from spiral-bound stainless strands. Great for repairs on entry-level bikes, stainless steel offers better corrosion resistance. Still manufactured to Jagwire's rigorous standards for quality, these cables provide excellent value.

BRAKES

Friction in a brake system results in poor lever feel and slow, sticky performance. Jagwire maintains specific standards for friction and tests hundreds of inner wires every week to ensure these high standards are met and maintained. Lubricated and pre-stretched during the manufacturing process; Jagwire inner wires will ensure worry-free performance.

STAINLESS STEEL ULTRA SLICK INNER GEAR

Highly polished, ultra-slick uncoated surface delivers incredibly accurate, smooth responses. Compatible with all performance housing and lubricants. Uncoated surface means there's nothing to flake off during installation or riding, so it delivers the most durable, consistent performance with 11 and 12 speed systems. Cable ends are colored black for easy identification

12-13 Speed

This XFlat Series

Narrow 1/2" X 11/128"

The KMC X-Flat is a high-performance, flat-top bicycle chain specifically engineered for modern 12-speed and 13-speed SRAM AXS drivetrains, offering smooth, quiet shifting with a sleek, narrow profile, enhanced durability and superior cleanliness thanks to pre-waxed using KMC GO Wax, reducing dirt buildup and extending life. It features a unique flat-top design for better interaction with SRAM's tight-spaced sprockets and includes a MissingLink for easy tool-free installation.

FEATURES

- Pre waxed with KMC GO (150ml KMCGCW150 and 500ml KMCGCW500)
- High Rigidity - Quick response & higher efficiency
- Highest Pin Power - Unsurpassed riveting technology
- Double X Durability - Double SP (Stretch Proof treatment) exceptional durability
- Double X Bridge Shape - Precise gear shifting
- Outer Plate Chamfering - Accurate shifting
- Inner Plate Chamfering - Expeditious shifting
- KMC's XFLAT series chains are designed to suit SRAM's flat-top chain profile.
- The flattop chain allows for a narrower chain that doesn't sacrifice strength or durability.
- XFLAT is compatible with SRAM's 12 speed and 13 speed AXS drivetrains and Transmission or T-Type drivetrains.
- Not compatible with other 12/13 speed systems or older SRAM groupsets.
- Waxed: Forms a protective barrier that outlasts oil-based products.

SPECIFICATIONS

- 1/2" x 11/128"
- 126 Links
- Supplied with a MissingLink (Chain connecting link)
- Compatibility : All SRAM 12-13 Speed derailleur systems using flattop chains

9-11 Speed

This XGlide Series

Narrow 1/2" X 11/128"

Compatible with 9-11 Speed Shimano CUES E-Bike System offering smooth and efficient shifting chain.

- Seamless and Intuitive Shifting Performance
- Designed with a dual X-bridge structure, this chain enhances gear engagement accuracy, optimizing shifting efficiency for a smoother and more intuitive riding experience.
- Perfectly compatible with 9 to 11-speed Shimano CUES e-bike systems, ensuring stability and top-tier performance for every ride.
- EPT, for maximum anti-rust protection

The non-toxic and environmentally friendly EcoProTeQ technology (EPT) from KMC provides chains with unsurpassed corrosion protection, doubling the longevity compared to conventional rust protection and setting new standards.

- 100% coating: each component of a link is treated separately. The first traces of rust appeared only after 650 hours of salt spray testing (twice as long as conventional rust protection).
- The coating penetrates into the chain material providing continued protection well into the life of the chain.
- Smooth surface for excellent running qualities, minimized dirt buildup and reducing maintenance.

Please note: These chains are only compatible with Shimano CUES. Not compatible with Shimano HG

KMC GO WAX

For a cleaner, faster, and longer-lasting performance.

Experience the next level of chain performance with KMC advanced dry wax formula. Designed to significantly reduce friction, enhance shifting and providing optimum efficiency, KMC GO WAX extends the life of your drivetrain by creating a durable microfilm on your chain that repels water and resists stickiness.

DURABILITY:

Once applied, the wax dries to form a protective barrier that outlasts oil-based products.

CLEANER PERFORMANCE:

Our waxed chains attract less dirt, minimizing the common causes of wear and ensuring smoother operation.

MAINTENANCE MADE SIMPLE:

With minimal dirt accumulation, your drivetrain requires less frequent care. Refreshing the wax is straightforward—simply use a dry brush or cloth. No degreasing necessary, on a simple touch up with KMC Go Wax.

ECO FRIENDLY:

Biodegradable and free from PFAS and harsh solvents, making it a responsible choice for both your bike and the environment.

MOTHERS MILK

designed to stay fluid in your tyre and won't dry out or ball up like other natural latex products. It is ammonia free and super easy to clean up. Lasting up to 6 months in all conditions.

KRMM 1 Litre
 RRP \$59.95
\$29.95

Orange Seal have 2 sealants - Regular (Original) and Endurance. Each has a strong suit of characteristics. See the chart on the following page for details. Compatible with most bike tyres and is eco-friendly. 118ml of sealant adds only 119.6g to your wheel.

REGULAR - TUBELESS TYRE SEALANT

Proven to seal large punctures up to 6.35mm. For riders that race, or check their tyres frequently, ride gnarly trails and want fast acting sealant.

ENDURANCE - TUBELESS TYRE SEALANT

Lasts 2-3 times longer, seals a little slower, and doesn't seal quite as large a hole as regular. Endurance is for the less technical rider and looking for longer sealant time.

LITHIUM BEARING BUTTER 125G

Lithium Bearing Butter is designed to lubricate and protect under the most hostile conditions you can throw at your bike. Lasting 3 times longer than standard assemble grease, Lithium Bearing Butter is perfect for open bearing applications, bottom brackets, wheel hubs and any fast moving bike parts.

- High lubricating power reduces friction and wear.
- Ideal for greasing open bearings.
- Does not degrade rubber seals.
- Superior protection against rust and corrosion.
- Excellent mechanical stability.
- Helps disassembly and prolongs the life of each component.
- Reduced wear under high or shock loads.

ILLUMINATE WATERLESS WASH+WAX

Cleans and polishes your bike without the need for water. Combining the innovative benefits of its polymer wax formula and nano ceramic (SiO2) technology. SiO2 Ceramic Wax is the most advanced protection that you can apply. This super hydrophobic water-based formula contains Silica Nano particles that will create a hard-coat protective barrier that repels water. KRUSH Illuminate Waterless Wash is perfect for maintaining your E-Bikes, MTBs and Roadies between heavier washes. Designed to be used exclusively with a microfibre.

KRILW 750ml

RRP \$35.99

KLUSTER KLEEN

Brake contamination anxiety is a serious situation when cleaning and detailing your MTB, especially when it comes to degreasing your drivetrain, which can expose your rear brake rotor and pads to unwanted overspray.

KRUSH have developed the perfect solution the Kluster Kleen tool. Simple and easy to install around your rear cassette. Features spoke lock to hold the Kluster Kleen in place. Allows rotation of your drivetrain whilst cleaning. Kluster Kleen has a large surface area to catch overspray. Once drivetrain has been hosed clean, simply detach the Kluster Kleen, dry and store for your next wash.

BY RIDERS | FOR RIDERS

SAN-X BIKE AND EQUIPMENT SANITISER + DEODORISER

Health and hygiene has never been more important, keeping your bike and your riding kit sanitised and bacteria free is essential!

KRUSH San-X is ideal for sanitising and deodorising your ride and kit, the full rental fleet and customer bikes in the workshop.

KRUSH San-X is a spray on sanitiser and disinfectant with the active ingredient Benzalkonium Chloride, remaining on the surface after drying, killing 99.9% of bacteria and some viruses.

KRSX 500ml

\$14.99

HOW TO USE

STEP 1. Shake well, hold spray 20cm from surface.

STEP 2. Spray KRUSH San-X on precleaned area until wet

(always pretest soft surfaces on a hidden area of fabric to ensure suitability before spraying a light even coating, do not saturate).

STEP 3. Wipe surface evenly with a clean dry microfibre cloth.

PRO BIKE DETAILING KIT

Includes:

- Rapid Wash 1 Litre foaming spray bottle
- Afterwash Spray 400g Aerosol
- Degreaser 1 litre foaming spray bottle
- Large brush with soft bristles
- Dual sided sponge
- Hand sized microfibre sponge
- Micro Fibre Cloth
- Chamois
- Serrated hook
- Stiff bristled drive train cleaning brush.
- 10 litre premium bucket with clip on lid

RECOIL SYSTEM

Recoil's range of thread repair kits and products and wire thread inserts enable you to carry out fast and efficient repair of damaged or stripped threads.

Recoil inserts are rolled from high quality stainless steel wire with a diamond shaped cross section, wound to the shape of a spring thread. Once the insert is installed into a tapped hole, it provides a permanent and wear resistant thread in the parent material designed to be stronger than the original thread.

The inserts are greater in diameter than the corresponding tapped hole and compress as they are installed. This allows maximum surface contact area with the tapped thread, safely and permanently anchoring the inserts into place. The insert's compensatory action shares the load over the entire bolt and hole, increasing holding or pull out strength. With a Recoil insert in place, load and stress are more evenly distributed. Recoil inserts can be used in aluminium and magnesium alloys, carbon fibres and other materials to achieve stronger and more reliable threads than the parent material alone.
